High Welding Performance

High-precision Full Digital control allows soft and stable arc.

- High-precision wire feeding system using encoder feedback.
- Stable wire feeding - feeding not affected by external factors such as supply voltage or ambient temperature.
- Consistent results - welding conditions can easily be reproduced from site to site.

Motor with encoder Wire spool brake to prevent wire loosening

2 drive 4 roll wire feeder

Easy Operation

- Simple control panel allows easy setting.

Simple control panel

Simple Structure

Fewer connection cables

- Remote controller connects to the wire feeder directly.

Reduced connections for improved flexibility
